About Asbury Research:

Research, Methodology, & Clientele

- **Our Research:** Asbury Research, established in 2005, produces unique and proprietary technical, quantitative and behavioral financial market research for professional investors. We help our clients to navigate the investment seas on a daily, weekly and monthly basis -- charting a course, and changing direction when necessary, to maximize portfolio returns and minimize portfolio risk. Our research focuses on the US stock market and market sectors, US interest rates, the US Dollar, and economically influential commodities like copper and crude oil, but integrates a broad spectrum of non-US asset prices that are statistically correlated to these US markets. This intermarket component of our research more comprehensively reflects global market conditions, which results in more forward looking and accurate investment strategies.
- **Our Methodology:** Our analysis is derived from a comprehensive list of *strategic* inputs including intermarket relationships, market volatility, investor sentiment, seasonality, price patterns and trend analysis, market breadth, inter- and intra-market spreads, and relative performance, all which are geared to determining upcoming market direction 1-2 quarters in advance. We then implement a conservative, consistent and repeatable *tactical* methodology to generate entry and exit points within that larger *strategic* bias.
- **Our Clients:** The typical Asbury Research client is a portfolio manager, hedge fund, or Registered Investment Advisor. However, our macro scope and breadth of financial assets covered has attracted a diverse clientele that include corporate investment committees, money center banks, and Commodity Trading Advisors.

About Asbury Research: *John Kosar, Director of Research*

John, a 30 year veteran of the US financial markets, spent the first half of his career on the trading floor of the Chicago futures exchanges where he had the opportunity to learn how the financial markets work from the inside out, while being directly involved with many different types of financial assets. This experience, early in his career, became the foundation for the unique analysis, insight, and global intermarket perspective that defines Asbury Research.

John is frequently quoted in the media and regularly appears on financial television. He was awarded the Chartered Market Technician (CMT) designation in 1999, is a former Vice President of the Market Technicians Association (MTA) and has served on the MTA's Board of Directors between 2002 and 2006.

Research & Services: *What You Get*

We communicate our investment analysis and ideas to clients primarily via the **8 different research reports** listed below, all which are accessible through the **Research Center** of our website. Clients are immediately and directly notified via email upon the release of each report, and typically receive **3-4 per week** plus a **monthly, customized web conference**.

Performance:

Specific, Actionable Investment Ideas

We track the performance of our market calls 2 ways:

1) in **four broad US financial market areas** (US stocks, US market sectors, US interest rates, US Dollar), and

2) in **individual asset prices** as shown in the table at right.

More information and detail is available in the Performance page of our website.

Number	Asset (Symbol)	Long/Short	Entry Price/Date	Exit Price/Date	Profit/Loss in Pts	% Gain/Loss

data through 09-14-2012

* These performance data are based on specific market calls taken directly from Asbury Research reports during 2012. We acknowledge that hypothetical performance results have many inherent limitations. No representation is being made that clients will achieve results similar to those shown. All market calls that appear in Asbury Research reports and are based on "at the close" entries and exits, hours after these reports were issued to clients. A larger version of the table is available upon request.

Research Reports: Keys To This Week

Keys To This Week, produced on Monday mornings, includes a 10-minute conference call on this report which we make available live or via recording. Keys To This Week lists and ranks the current week's key market factors for major US asset prices, and discusses how we think they will affect upcoming market direction.

KEYS TO THIS WEEK
Keys To This Week: October 17th, 2011
 Posted on: Monday, October 17th, 2011

The US Stock Market
Current Bias: New Positive as of October 11th (from Neutral on September 30th)

This Week: our table retains last week's slightly Positive Near Term bias and very strong, one-sided Positive Intermediate Term bias. New and most important this week are: 1) last week's bullish shift in near term momentum — which indicates that **at least a near term bottom is in place at the recent lows**, and 2) what appears to be emerging bullish breakout from 2 months of sideways congestion — which indicates that **a more sustainable, quarterly bottom could be developing**. Meanwhile, there continues to be a pretty compelling list of environment indicators like recent breakouts in European equities, extremes in volatility, market breadth and investor sentiment, and a 54-year trend of acute seasonal strength during November and December — all which indicate **favorable conditions for this emerging US stock market rally to extend through year end**. The only potential red flags going into this week are wide extremes in both 2-year Swap Spreads and in corporate bond spreads — which would be alleviated if the slight narrowing that we saw in these at the end of last week continues this week. Finally, **small cap is amid favorable conditions to outperform** the broad market if this Q4 US stock market advance emerges as expected.

THE US STOCK MARKET		FOR THE WEEK OF OCTOBER 17, 2011	
	POSITIVE FACTORS	NEGATIVE FACTORS	
NEAR TERM (one to several weeks)	NEAR TERM MOMENTUM	MONTHLY OVERBOUGHT	
	US CHART PATTERNS?	2 YEAR SWAP SPREAD	
	EUROPEAN SHARE PATTERNS	BROKING 044 CORP BOND SPREAD	
	RELATIVE PERFORMANCE: SMALL CAP		
INTERMEDIATE TERM (one to several months)	VOLATILITY: THE VIX	INTERMEDIATE TERM MOMENTUM	
	INTERMARKET: US INT RATES		
	INVESTOR SENTIMENT		
	QUARTERLY OVERSOLD		
	MARKET BREADTH		
	SEASONALITY

KEYS TO THIS WEEK
 Distributed to clients on Mondays, this weekly report provides a bullet-pointed list of key factors that we most likely to influence the direction of the US stock market and market sectors, US interest rates, and the US Dollar.

Topics covered in this Report:
[Eggs](#) [Consumer Staples Sector](#) [Stock Market Sectors](#) [The U.S. Dollar](#) [The U.S. Stock Market](#) [U.S. Interest Rates](#) [Treasury](#)

Reports by Topic
 U.S. Stock Market

Research Reports: Commentaries

Commentaries are *strategic* in scope and focused on the intermediate term, identifying emerging price trends in the major areas of the US financial landscape typically 1-2 quarters in advance.

The screenshot shows a webpage from Asbury Research. The header includes the company logo, a user login status 'Welcome Bob, John You are currently logged in', and a 'RESEARCH CENTER' button. Below the header is a navigation menu with links for Home, About Us, Our Research, Market Calls, Media, Blog, Testimonials, and Contact. A search bar is also present. The main content area features a 'COMMENTARY' section with the title '5 Reasons For A Rebound In US Stocks' and a post date of 'Wednesday, August 10th, 2011'. The 'Summary' section states: 'The current sharp decline in the US stock market is unlikely to continue appreciably further from here, if at all, without at least a multi-week corrective rebound first.' The 'Introduction' section begins with 'From our [August 8th Keys To This Week](#) report.' and includes a quote: 'Last Friday's spike in NYSE volume amid oversold conditions plus extreme in investor sentiment and market breadth, all while most major US indexes are positioned just above major support levels, establishes a conducive environment for at least a near term, corrective bounce to emerge sometime this month - perhaps after our 1150 initial downside target is met in the benchmark S&P 500.' The text continues: 'Our 1150 downside target in the S&P 500 was met later that day (August 8th), resulting in a 104 point, - 8% decline since we first discussed it in our [August 5th What We're Watching Today](#) pre-opening market comments. Now that our initial downside target has been met, today's report displays and discusses 5 different market metrics that indicate favorable conditions for at least a multi-week corrective rebound to emerge from at or near this week's lows.' A 'Momentum (Overbought/Oversold)' section follows, mentioning 'Chart 1 displays the S&P 500 (SPX) since 2007 in the upper panel (black bars), along with the 1-month rate of change in the daily closing price of SPX in the lower panel (blue line)'. On the right side, there is a 'Research & Reports' sidebar with a list of links: 'Abury Alert', 'Commentary', 'Global Seasonal Analysis', 'Keys To This Week', 'Sector Watch', 'Sentiment Survey', 'Special Report', 'US Financial Market Chart Book', and 'What We're Watching Today'. Below this is a 'PRINT' button and a 'TEXT SIZE' control. At the bottom of the sidebar, it says 'This entry is filed under: COMMENTARY' and 'Produced periodically throughout the month, our commentary reports analyze and define new investment opportunities and emerging trends in the U.S. and global financial markets.' It also lists 'Topics covered in this Report:' with tags for 'Technology Sector', 'The U.S. Stock Market', and 'Metal'. A 'Reports by Topic' section at the bottom lists 'U.S. Stock Market', 'U.S. Interest Rates & Treasuries', and 'The U.S. Dollar'.

Research Reports: *Asbury Alert*

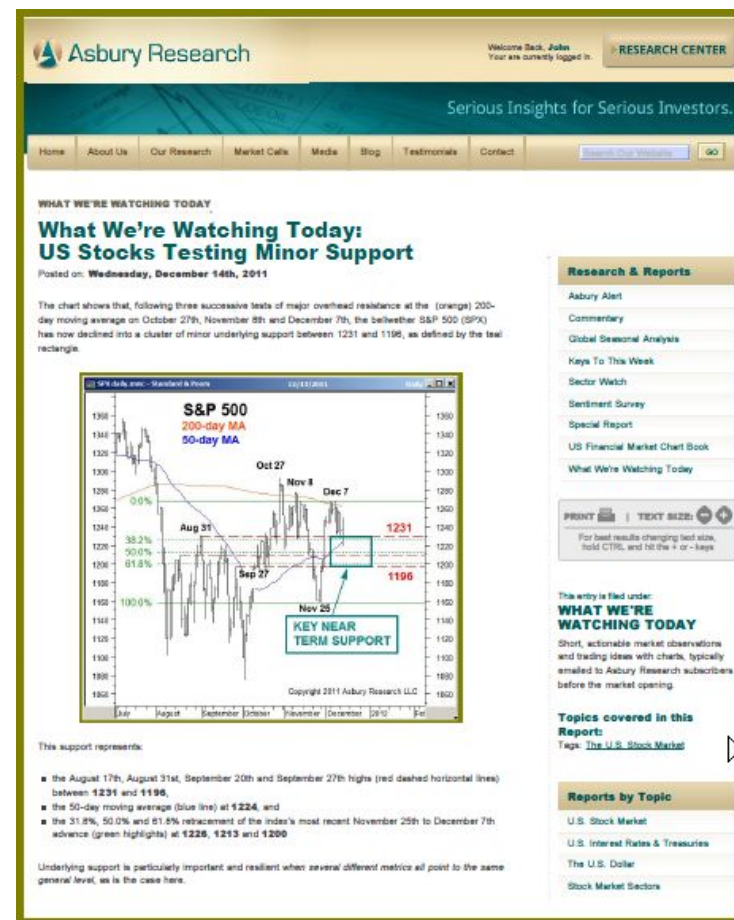

Asbury Alerts are *tactical* in scope and focused on the short term, providing actionable ideas and specific entry and exit points within on our larger, more strategic outlook as it appears in our Commentaries and other reports.

The screenshot displays the Asbury Research website interface. At the top, the logo for Asbury Research is visible on the left, and a user login status 'Welcome Back, John' and 'You are currently logged in.' is on the right. Below the logo is a navigation menu with links for Home, About Us, Our Research, Market Calls, Media, Blog, Testimonials, and Contact. A search bar is also present. The main content area features a header with the text 'Serious Insights for Serious Investors.' and a sub-header 'ASSBURY ALERT'. The main title of the report is 'US Stocks: Making Another Attempt At A Q4 Advance', dated 'Tuesday, October 11th, 2011'. The report includes sections for 'Summary', 'Introduction', and 'Bullish Shift In Momentum Confirms A Near Term Bottom'. The 'Summary' section states: 'Monday's bullish shift in market momentum in the S&P 500 confirms that at least a near term bottom is in place in the US stock market at its 1075 October 4th low, and suggests that the intermediate term US stock market advance that we have been expecting to emerge in Q4 2011 is underway. This shift in momentum "officially" turns our market bias back to Positive or bullish, from Neutral as of September 30th.' The 'Introduction' section begins with: 'Since September we have been pointing out what we believe to be favorable conditions for the US stock market to begin an intermediate term advance during Q4, one that could extend through at least early Q2 2012, and waiting for tangible evidence that this advance was beginning.' The 'Bullish Shift In Momentum Confirms A Near Term Bottom' section states: 'The upper panel of Chart 1 displays a daily bar chart of the S&P 500 (SPX) since July, along with its 4- (red line) and 9-day (blue line) moving averages and an indicator known as the Parabolic SAR (red dots). The MACD indicator appears in the lower panel. We use all three indicators on the chart, together, to identify changes in near term market direction.' On the right side of the page, there is a 'Research & Reports' sidebar with a list of links: Asbury Alert, Commentary, Global Seasonal Analysis, Keys To This Week, Sector Watch, Sentiment Survey, Special Report, US Financial Market Chart Book, and What We're Watching Today. Below this is a 'PRINT' button and a 'TEXT SIZE' selector. At the bottom of the sidebar, there is a section titled 'Topics covered in this Report:' with a link to 'The U.S. Stock Market' and a 'Reports by Topic' section with links for 'U.S. Stock Market', 'U.S. Interest Rates & Treasuries', and 'The U.S. Dollar'.

Research Reports: *What We're Watching Today*

What We're Watching Today is typically a one chart, one idea pre-market opening report that is taken directly from our dynamic Watch List of between 100-150 charts, which we review first thing every morning. WWWT focuses on key changes in a broad list of global asset prices that can have a tangible effect on upcoming market direction.

Research Reports: *Sentiment Survey*

Investor Sentiment Survey is a monthly report that displays and analyzes a broad list of both asset flow- and survey-based measures of both professional and retail investor sentiment, and discusses their near and intermediate term directional implications for the US financial markets.

The image shows the cover page of the "Sentiment Survey" report by Asbury Research. The page features the Asbury Research logo and tagline "Serious Insights for Professional Investors" at the top. Below this, it states "Published Monthly - Volume 6, Number 7" and provides contact information: "224.599.4112 | www.asburyresearch.com". The title "Sentiment Survey" is prominently displayed in a large, bold font, with the subtitle "A Logical Look At An Emotional Market" underneath. The author's name, "John J. Kosar, CMT", and the date, "October 20, 2011", are listed below the title. A horizontal line separates the header from the "Executive Summary" section. The summary consists of four bullet points, each starting with a bolded category and a sentiment outlook, followed by a brief analysis. The categories are: "The US Stock Market", "US Treasury Prices", "The US Dollar", and "Commodity Prices and The Energy Sector".

Sentiment Survey

A Logical Look At An Emotional Market

John J. Kosar, CMT
October 20, 2011

Executive Summary

- **The US Stock Market: Near To Intermediate Term Bullish.** The latest data shows that both retail and professional investors are extremely pessimistic about the direction of the US stock market, if not terrified that prices will move to new 2011 lows. History tells us that this is precisely when investors should be *looking for opportunity*. **These data suggest that US equity prices are likely to rise into year end**, and could extend their gains into Q1 2012.
- **US Treasury Prices: Near To Intermediate Term Bearish.** Historic bullish extremes on long dated US Treasury prices by retail futures traders, brokerage and advisory firms, and futures options traders, amid favorable investor sentiment for a bottom to emerge in the Japanese stock market, all indicate **ideal investor sentiment for a bottom to emerge in benchmark US interest rates during Q4 2011**.
- **The US Dollar: Near To Intermediate Term Bearish.** The latest data from both retail and professional trend followers indicate **favorable conditions for a decline in the US Dollar index that extends through at least year end and potentially into early 2012**, and suggests that an important peak may already be in place in the greenback at the early October highs.
- **Commodity Prices and The Energy Sector: Near To Intermediate Term Bullish.** Historic most bearish extremes by three different types of investor in the CRB Index, copper prices and crude oil prices suggest **favorable conditions for an upcoming 1-2 quarter rebound in commodity prices**, one which could have a positive effect on US equity prices.

ASBURY RESEARCH Serious Strategic and Tactical Insights for Professional Investors | www.asburyresearch.com

Research Reports: Sector Watch

Sector Watch is a monthly report that identifies the specific sectors of the S&P 500 that, according to our latest asset flow- and market momentum-based data, are amid favorable conditions to begin 1-2 quarter trends of relative outperformance / underperformance versus the S&P 500. Our YTD performance in this area appears below.

Asbury Research's 2012 YTD Sector Calls (Relative Performance vs. S&P 500)						
#	Asset (Symbol)	Long/Short	Entry Date	Exit Price/Date	Actual Performance vs. S&P 500	Asbury Performance

Global Seasonal Analysis

Seasonal Trends In Global Financial Markets

John J. Kosar, CMT
June 8, 2012

Executive Summary

- Global Equity Prices:** Common to all US, European and Japanese indexes is that the May-June period either marks the end of a sharp seasonal decline from the April highs (USA, England) or the beginning of the 1-2 month seasonal bounce that follows it (Germany, Japan), the latter which eventually leads into more acute seasonal weakness into September.
- US Interest Rates:** The June to August time frame marks the beginning of an extended period of seasonal weakness in US interest rates that reaches its nadir in September but extends into the 4th Quarter.
- UK Interest Rates:** June, the 2nd seasonally strongest month of the year for the yield of the 10-Year Euro (formerly German) Bund since 1967, marks the end of a strong two-month rebound and leads into an extended period of overall seasonal weakness that runs from July through November.
- Japanese Interest Rates:** June, the seasonally strongest month of the year for the yield of the 10-Year Japanese Government Bond (JGB) since 1977, represents a very sharp one-month seasonal rebound from May, the 2nd weakest month, and leads into more seasonal strength during July.
- The US Dollar:** Common to the Dollar versus Europe and Japan is that June represents the beginning of a multi-month seasonal decline that extends through July versus the Swiss franc and euro and through October versus the yen.
- Commodity Prices:** Common to the CRB Index and crude oil, gold and copper prices is that a seasonally weak June leads into a sharp one to several month rebound.

ASBURY RESEARCH Serious Strategic and Tactical Insights for Professional Investors | www.asburymonth.com

Research Reports: *US Financial Market Chart Book*

US Financial Market Chart Book is a monthly collection of key charts that collectively convey our best investment ideas for the next one to several months in the major US financial markets. Chart Book comes with an accompanying video in which John Kosar, Director of Research, walks you through the details of each investment idea.

Web Conferences: ***Personalized, Interactive, & Real Time***

- Interactive monthly sessions, up to one hour in length, with John Kosar (Director of Research). More frequent sessions also available.
- Content is prepared specifically for your firm, covering the assets and market areas you are most interested in, with Q & A.
- Quick, easy log in process via GoToMeeting.
- Participants can log in individually via computer and telephone, or as a group in your conference room.
- PDF of all charts covered is emailed to participants after the conference.

Testimonials: *What Our Clients Say About Us*

"I have not seen better technical analysis in my 19-year career. John (Kosar, Director Of Research) is objective, clear, experienced, sensible, and accountable. He remains disciplined when markets are schizophrenic and does not hesitate to present contrarian calls even when plenty of seasoned participants are pointing the other way. Accurate macro forecasting is the product of sound fundamental analysis and superior technical analysis, so John's work is invaluable to me."

Macroeconomic Strategist, Investment Research Firm, New York

"He (John Kosar, Director of Research) does excellent work on helping money managers time markets"

Managing Director, Head Of Trading, Global Long/Short Equity Fund, Greenwich, CT

"John Kosar at Asbury Research has provided us with timely research and has helped us to avoid making bad decisions at market turning points. Well worth the cost."

Investment Committee Partner, Registered Investment Advisor, Wisconsin
